

Safe and successful operations in the oil and gas industry require a critical understanding of how valves and their associated equipment operate. Equally important is recognition of potential leaks, hazards and failures and an appreciation of crucial valve maintenance. In fact, awareness of valves is crucial whatever your role in the industry.

Our Essential Valve Knowledge training provides this understanding; it is delivered at two levels and is suitable for all. The level of course most suited to you will be dependent on your job function and experience.

Level 1 – Introductory

Designed to build basic valve awareness, this introductory course is suitable for those who have no prior knowledge or who have a basic appreciation of the primary valve types. Course delivery can be tailored to suit any audience including office-based personnel and those who are new to the industry.

Level 2 - Advanced

An in-depth course that is a 50/50 split between workshop and classroom based training. Delegates have the opportunity to strip down valves and actuators, examine their internal components and discover how these can deteriorate. Effective maintenance techniques are also demonstrated.

This course has been designed for engineers, operators, mechanical technicians and valve buyers.

Score Training also offer a range of courses on specific valve types, accessories and maintenance including:

- Actuators (1 day)
- Ball Valves (1 day)
- Compression Packing (1 day)
- Control Valves (1 day)
- Plug Valve Maintenance (1 day)
- Pressure Safety Valves (3 days)
- Sealant Injection (1 day)

Essential Valve Knowledge

More information on each of these courses and their content is provided overleaf.

Introduction to Essential Valve Knowledge (EVK)

The Essential Valve Knowledge (EVK) courses offered by Score Training have been designed to provide engineers, buyers and operations personnel in the oil & gas industry with a critical understanding of valves and associated equipment.

Part of the Score Group of companies, providing valve maintenance and management services to the oil, gas, subsea and energy industries, Score Training draw on over thirty years of experience and expertise in our field to deliver practical training solutions to operators and service companies worldwide.

Our EVK Level 2 course includes hands-on workshop based elements, allowing training delegates the opportunity to strip down valves then to handle valve components and associated equipment, gaining a real insight as to how these function.

Practical training is delivered in our custom-built training workshop. The workshop is extensively resourced with a full range of specialist equipment including hydrostatic and gas test cells, a PSV test cell and a simulated flow-pool. An extensive range of training valves in a variety of conditions is used during workshop sessions to provide training delegates with experience in realistic scenarios.

Our EVK courses are structured, well-designed and consistently applied providing a standard for valve knowledge training.

Are you ready to join the growing list of companies who recognise EVK as the benchmark for valve knowledge training?

Essential Valve Knowledge Level 1

Entirely classroom based, 3D modelling and an extensive selection of cut-away training valves are used to aid visualisation and understanding of valves and their main components.

Course Content

The course focuses on the following valve types:

- Pressure Safety Valves
- Control Valves
- Check Valves
- Needle Valves
- Plug Valves
- Gate Valves
- Globe Valves
- Ball Valves
- Butterfly Valves
- Choke Valves

Training also provides a basic appreciation of the following areas:

- Flow manipulation
- Pressure
- Common valve defects
- Hydrocarbon releases

Following training, delegates will have the necessary knowledge to identify the primary valve types, operators and the principles of their selection. A heightened awareness of the potential failures that can lead to hazardous situations will be gained.

Duration:
1 Day

Essential Valve Knowledge Level 2

Through a combination of theory and workshop-based training, delegates are given the opportunity to strip down various valve types, enhancing understanding of their components and functions.

Course Content

The course focuses on the following valve types:

- Pressure Safety Valves
- Control Valves
- Check Valves
- Bellows Valves
- Plug Valves
- Gate Valves
- Globe Valves
- Needle Valves
- Ball Valves
- Butterfly Valves
- Choke Valves

Workshop-based training also covers:

- Seats & Seals
- PSV Calibration
- Non-Invasive Maintenance
- Pressure Forces
- Pressure Testing

As a result of the training, personnel will be able to identify and operate a range of valve types, spot the early warning signs of any potential problems and test valves to ensure they are functioning correctly. They will understand when and how to apply basic valve maintenance techniques.

Duration:
5 Days

**This course is available at a rate discounted by 20% to those who have already attended the Level 1 course.*
