Transmission Services supplied by Score Subsea and Wellhead Limited

Transmissions are found in most heavy industrial equipment. It is essential that you have this equipment operating to the highest optimum level to minimise down time and lost revenue.

Our Transmissions Division can support you to maximise uptime.

At Transmissions we have the facilities to fully load test most industrial transmissions. To further aid industry, Score have recently upgraded our facilities to fully test all Allison World Transmissions e.g. MD 3060 HD 500.

Score's Transmission Division Experience:

Our fully trained personnel have over 60 years experience in transmission rebuilds. We also understand that fast-track turnaround is critical, so we guarantee that all work will be carried out quickly and efficiently in a bid to reduce extended down time situations.

Diagnostic Services and Troubleshooting:

An on-site diagnostic service to recalibrate or pinpoint problematic issues is also available from Transmissions, which may prevent the need to remove the unit for repair. These services are available on all Allison World Transmissions which are commonly found in cranes, refuse collection trucks, mud pumps, winches, and various other offshore plant equipment. We can also undertake all light engineering work including repairs and supplies of hydraulic pumps, PTO's forklifts, diffs and many other units.

Score Transmissions also operate a collection and delivery service using our own transport.

Score companies are also FPAL registered.
